Re: establishing Pro 2 eligibility

To whom it may concern,

Dylan Craaybeek successfully completed the Avalanche Science Program (ASP) Certificate of Occupational Proficiency as a Snow, Weather, and Avalanche Field Technician at the Colorado Mountain College [CMC], Leadville campus from November 2018 - May 2020. Throughout this two-year program he completed at least 10 days of operational avalanche experience over the course of two winter seasons in Colorado.

Applicable field work comes from independent assignments completed for the course SAO164 Snow, Weather, and Avalanche Observations. These field work missions included following the ASP Fieldwork Safety Plan and involved significant operational risk management practices, and included completing full profile snow pits, taking field weather observations, taking weather station observations, and applying all observations and data collection into a decision-making process while traveling in and around avalanche terrain.

You will find the related documentation for this fieldwork attached to this letter.

Sincerely,

A handwritten signature in black ink, appearing to read 'R. Coit'.

Roger Coit, Program Director
Avalanche Science Program
